

Dec. 28, 2018:

Dispenser set up:

A jug with a hole in the bottom is suspended above the food dish with a servo mounted to the bottom. The servo motor plugs the hole, and when the button on the Blynk app is pressed, the servo moves away long enough to let a treat drop into the dish.

Video Setup:

Currently a private YouTube livestream. Working on downloading a IP camera controller and porting it to the wifi router so that I can utilize the the built in IP camera screen in the blynk app.

This project would not be so easily done without the amazing servers and libraries of Blynk.
